1. Organisation Overview

Name: Kotalicious.

History: Kotalicious began as a small Braamfontein food stall serving the kota — a hollowed quarter-loaf of bread piled with chips, cheese, Russian sausage and atchar. Close to Wits, UJ and several colleges, it built a loyal student following through word-of-mouth and social media alone, with no formal website.

Mission: To serve Braamfontein's most generous, flavour-packed kotas while sharing South African street food culture with the world.

Vision: To become an internationally recognised kota brand that never loses its affordable, community roots.

Target audience: Primarily students and young professionals around Braamfontein; secondarily, food-curious visitors and an international audience discovering South African street food online.

2. Website Goals and Objectives

Goals:

1. Raise Kotalicious's profile with an international audience.
2. Make the menu, prices and location instantly easy to find.
3. Convert online visitors into WhatsApp orders and walk-in visits.
4. Improve customer satisfaction through easy feedback and small loyalty perks.

Key performance indicators:

- Monthly unique visitors, including the % from outside South Africa
- Enquiries or orders generated through the site each month
- Click-throughs from the site to Instagram and TikTok
- Average customer satisfaction rating from an on-site feedback form
- Returning-visitor rate

3. Current Website Analysis

Not applicable in the traditional sense — Kotalicious has no existing website. Its only online presence is organic mentions from customers on TikTok and Instagram.

- **Strength:** genuine word-of-mouth buzz and an authentic student following, at no marketing cost.
- **Weaknesses:** no central, reliable source for the menu, prices, hours or location; reach limited to people already nearby; no way for an international audience to discover the brand or for customers to order ahead.

4. Proposed Website Features and Functionality

- **Homepage:** hero banner, tagline and featured kotas
- **Menu page:** photos, descriptions and prices for every kota
- **Our Story page:** Kotalicious's history and what a kota is, written for readers unfamiliar with South African street food
- **Gallery:** photos of the kotas and the shop
- **Find Us page:** address, embedded map and opening hours
- **Ordering:** click-to-WhatsApp ordering and a contact form
- **Social proof:** customer testimonials and a linked Instagram/TikTok feed

5. Design and User Experience

The branding is bold, appetite-driven and photo-led, celebrating the texture of the food itself rather than generic clichés.

- **Colour scheme (Figure 1):** Braai Orange (primary/CTAs), Charcoal (headings, nav), Golden Yellow (accent) and Warm Cream (background).
- **Typography:** a bold, rounded sans-serif for headings; a clean, simple sans-serif for body copy, sized for small screens.
- **Layout and design:** mobile-first, single-column, large food photography, short scannable sections and a sticky “Order on WhatsApp” button.
- **UX considerations:** a simple five-item nav, large tap targets, compressed images for fast loading, and key CTAs above the fold.

Figure 1: Proposed colour palette.

Figure 2: Low-fidelity wireframe of the homepage layout.

6. Technical Requirements

- **Domain:** kotalicious.co.za at launch, with kotalicious.com registered later for international reach.
- **Hosting:** a South African shared-hosting provider, for fast local load times and POPIA-friendly local data storage.
- **Languages and frameworks:** HTML5, CSS3 and JavaScript, with a responsive framework (e.g. Bootstrap) for the mobile-first layout, and a simple third-party form handler for enquiries since no server-side backend is required initially.

7. Timeline and Milestones

A suggested nine-week build, to be aligned with the module’s actual submission dates:

Milestone	Timeframe	Deliverable
Research & planning	Week 1–2	Finalised proposal, sitemap, content list
Wireframing & design	Week 3–4	Low-fidelity wireframes, colour palette, mockups
Development	Week 5–7	Coded homepage, menu, story and contact pages
Testing & refinement	Week 8	Cross-device testing, bug fixes, content proofing
Launch	Week 8	Domain live, site published, socials linked

8. Budget

Item	Estimate	Frequency
Domain registration (.co.za)	R89 – R150	Per year
Shared web hosting	R35 – R99	Per month
Website design & development	R0 (self-built for this project)	Once-off
Ongoing maintenance & updates	R150 – R300	Per month (optional)
Estimated Year 1 total	≈ R1,100 – R2,500	

Figures reflect current South African registrar and hosting rates (2026). Development cost is R0 as the site is self-built as part of this project; an outsourced build would typically add R3,000–R15,000 once-off.
